- FERTILIZER
- CHEMICALS
- FUEL

Conservis CropTracker™ brings the power of the web to crop inputs and harvest production management.

Conservis

Decision Ag™

CropTracker™

"Conservis's latest addition to the CropTracker™ family-Inputs has been immensely valuable to our operation. We now have better control and accurate real time visibility of all our inputs-related activities without the hassle of paper recordkeeping."

-Brian Molitor

Molitor Brothers, Cannon Falls, MN

Conservis's CropTracker™ Inputs module is a **flexible, secure, web-based tool** that provides a reliable way for you to record critical inputs sourcing, inventory and field-level applications information. The system integrates with your existing infrastructure to capture and record the data that **you** determine you need to track your inputs from your supplier to field application. Easier than pencil and paper. Faster and more reliable than spreadsheets. Peace of mind knowing you're in control.

The Problem: It's time to plant, spray or spread and you're already working long hours keeping track of where all your inputs are going, keeping records and filling out forms. As you know, that to do an accurate analysis of your inputs usage, cost per acre and on hand inventory is close to impossible, but critical to understanding your margins and producing a good plan.

Meeting Your Critical Needs: CropTracker Input's easy-to-use in-field entry via its Android App for Smartphones or Tabs in combination with a web back-end takes the risks and uncertainty out of inputs record-keeping. Our system provides unparalleled accuracy, giving you the reliability and assurance you need for:

- Records inputs contract deliveries
- Records planning data – to facilitate inputs purchase decisions
- Records and coordinates inputs purchasing activities
- Real-time accurate inputs inventory management
- Records inputs activity data in the field including spraying, spreading and planting field activity data; weather conditions, field conditions, and other observations
- Records and manages vendor and field inputs returns including inventory restocking and payment or credits for returned inputs

Instant Reporting: Push a button and generate dozens of reports, for example:

- Field Application - Summary
- Field Application - Crop Protection
- Field Application - Planting
- Inputs Position
- Inputs Inventory by Category
- Inputs Inventory by Location

Easy to Set Up, Easy to Use:

From the field to the office, CropTracker™ is intuitive and easy:

- Quick-start set up
- Web & Cell accessible
- Wireless data collection services
- On-site training available
- 24 x 7 customer support
- Ongoing training webinars
